

Canine TPLO Report

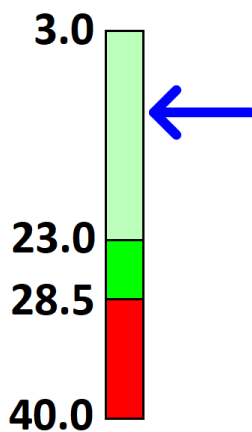

12:12:33

SampleOwner / SampleDog / 19-Jan-2024

The Tibial Plane Leveling Osteotomy (TPLO) is a procedure to lower the effective value of the Tibial Plane Angle (TPA). High values of TPA are weakly correlated with risk of CCL damage. Other stifle procedures might also be considered.

TPA

The TPA measurement for this stifle is 10.7 degrees and is indicated on the diagram to the left by the blue arrow.

The Tibial Plane Angle (TPA) of the stifle joint is normal or low.
